

Job Description: **Software Developer**

We are looking for an entry to mid-level software engineer to help us maintain existing software, and develop new software needed for our growing business. Applicants should be able and willing to work on a small team, using the agile process. The ideal candidate will be motivated to provide input and help design new systems. If you don't want to work for a code shop, but as an important member of a solutions team with the goal of making current processes more efficient, and have an eye for the future, you are the kind of candidate we are looking for.

Primary Responsibilities:

- Developing and maintaining internal applications in C# .NET, WPF, and Entity Framework
- Designing and maintaining new software both in house, and cloud based using Microsoft Azure platform
- Creating scenarios and testing other applications
- Collaborating with co-workers to design and implement software solutions to issues as they arise.

Skill Requirements

- Proficient in C# .NET, Entity Framework, SQL Server, Visual Studio, and GIT
- Ability to work on small team with end users in the same building, and trusted to stay on task without being micromanaged
- Knowledge of the agile process and ability to write, prioritize, and execute user stories
- Computer Science or related software focused college degree
- Desire to be an important member of a growing team, and not just another code monkey
- Understanding of MVC, MVVM, and other software architectures
- Understanding of using the appropriate design patterns for the task at hand to minimize effort, and maximize code re-use and extensibility
- Strong communication skills

Nice to have:

- The following technologies for up-coming projects: Web API, Token based authentication/single sign in, Angular 2.x, ASP.NET, or related/equally versatile web technologies
- Android/iOS and or Xamarin experience

Bonus

- VBA
- Architectural or Graphic Design industry experience
- Experience building automated systems
